

PROJECT PROFILE

Anglicare

Client

Anglicare - Australia

Project

Anglicare is one of Australia's leading aged care providers, operating 23 retirement and residential care facilities across greater Sydney. It had been acquiring or building new facilities to meet the increasing consumer demand. This meant that they had adopted multiple incumbent data systems that were not linked or integrated.

Anglicare needed to;

- Manage their facilities in one centralised platform
- Identify any missing or incorrect information in their existing handover documentation
- Ensure each facility, and the organisation, was compliant with the Federal Aged Care Act
- Use a strategic and efficient system for ongoing maintenance planning and budgeting

Scope

- Provision of OmTrak Site Works and Documents
- WebFM Consulting.

Value Added

WebFM's maintenance planning has reduced Anglicare's total maintenance spend by between \$500,000 and \$1 million
